REC_DS using C_Week 2_COD_Question 2

Attempt : 1 Total Mark : 10 Marks Obtained : 10

Section 1: Coding

1. Problem Statement

Moniksha, a chess coach organizing a tournament, needs a program to manage participant IDs efficiently. The program maintains a doubly linked list of IDs and offers two functions: Append to add IDs as students register, and Print Maximum ID to identify the highest ID for administrative tasks.

This tool streamlines tournament organization, allowing Moniksha to focus on coaching her students effectively.

Input Format

The first line consists of an integer n, representing the number of participant IDs to be added.

The second line consists of n space-separated integers representing the participant IDs.

The output displays a single integer, representing the maximum participant ID.

If the list is empty, the output prints "Empty list!".

Refer to the sample output for the formatting specifications.

```
Sample Test Case
```

```
Input: 3
   163 137 155
   Output: 163
Answer
   // You are using GCC
   #include <stdio.h>
   #include <stdlib.h>
   // Define the structure for a node in the doubly linked list
   typedef struct Node {
      int data:
      struct Node* prev;
      struct Node* next:
   } Node;
  // Append function to add a new node to the end of the list
   void append(Node** head, int value) {
      Node* new_node = (Node*)malloc(sizeof(Node));
      new_node->data = value;
      new_node->prev = NULL;
      new_node->next = NULL;
      if (*head == NULL) {
        *head = new_node;
      } else {
        Node* temp = *head:
        while (temp->next != NULL)
          temp = temp->next;
```

```
240701520
                                                240701520
    temp->next = new_node;
    new_node->prev = temp;
// Function to print the maximum participant ID
void print_max_id(Node* head) {
  if (head == NULL) {
    printf("Empty list!\n");
    return;
  }
  int max_id = head->data;
  Node* temp = head->next;
  while (temp != NULL) {
    if (temp->data > max_id)
      max_id = temp->data;
    temp = temp->next;
  }
  printf("%d\n", max_id);
int main() {
  int n;
  scanf("%d", &n);
  Node* head = NULL;
  if (n == 0) {
    print_max_id(head);
    return 0;
  }
  for (int i = 0; i < n; i++) {
    int id;
    scanf("%d", &id);
    append(&head, id);
                                                                          240101520
                                                240701520
  print_max_id(head);
```

```
// Optional: free allocated memory
Node* temp;
while (head != NULL) {
    temp = head;
    head = head->next;
    free(temp);
}

return 0;
}

Status: Correct

Marks: 10/10
